

CALIFORNIA ENERGY DESIGNS
SYSTEM DESIGN, DEVELOPMENT, & DEPLOYMENT FOR:
HVAC | PLUMBING | AIR QUALITY CONTROL

TITLE 24 ENERGY CALCULATIONS & COMPLIANCE

The California Energy Code (CEC) is a set of regulatory mandates and defined industry standards (often referred to simply as, “Title 24” – a shortening of its overall placement within the broader California Code of Regulations). These standards include **highly-localized** provisions which require a depth of **regional knowledge** & **expertise**, often undergoing significant alterations in technical detail as the law adapts to a **changing energy landscape**. California Energy Solutions has an **intimate knowledge** of the CEC, its requirements, and has provided clients throughout the state with **detailed Title 24 evaluations** (including room-by-room load calculations) to ensure compliance with all local statutory conditions.
